VERSION 1.30 RELEASE NOTES

Trimble® Connect AR v1.30 is now available for download from the Google® Play and Apple® App stores. If you have automatic updates enabled the new version will download and install to your device automatically.

New Features, Changes and Enhancements

These release notes describe the features, changes, and enhancements that are in Connect AR v1.30.
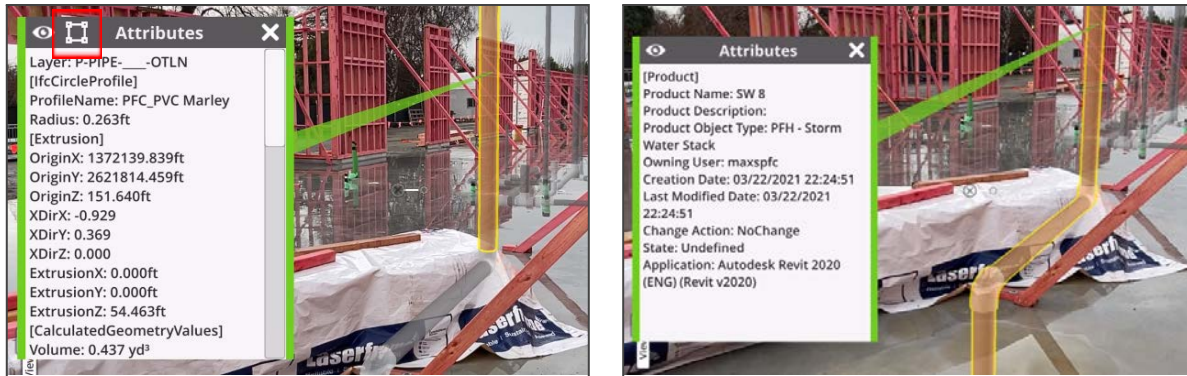

Release Highlights
● Select and highlight Assembly/System level objects
● Isolate layers and objects
● Dynamic measuring tape when taking measurements
● Sync multiple models to latest version from Quick Access menu

| Improvements and Bug Fixes |
|---|
| ● Improved PDF document browser and management |
| ● PDF app also supports images (PNG, JPG, TIF) |
| ● Fixed a bug in the QR Marker extension that created duplicate Markers |
| ● Fixed a rare scenario where some objects would not be visible |
| |

Select and Highlight Assembly/System Level Objects

Model objects that are part of an assembly will now display an assembly icon ⬚ in the Attributes panel. Tapping on this icon will select and highlight the entire assembly. Supported model formats include Tekla, IFC, and Revit systems.

Isolate Layers and Objects

Long tapping on the visibility icon 👁 will isolate the selected model data. This works in both the Layers panel to isolate individual layers, and also in the Attributes panel to isolate individual objects or assemblies.

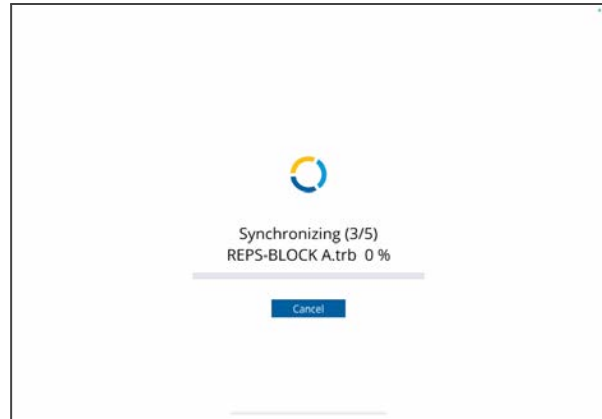

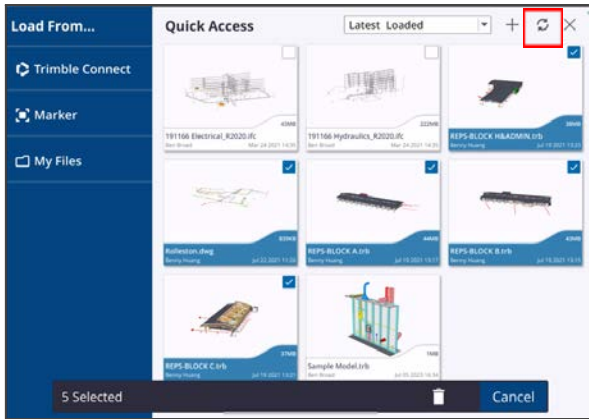

Dynamic Measuring Tape

The distance measurement apps have been updated to include a dynamic measuring tape that provides real time measurement information. This allows multiple measurements to be checked quickly, while providing confidence the correct point has been successfully measured.

Sync Models to the Latest Version

The Quick Access menu contains a new Sync icon ↻, tapping this icon will check all models for newer versions and download these if available. A partial sync can be performed by long tapping and selecting the models you would like to sync.
